

You will be the “face” of technology for the company and will display the gravitas to champion technologies both internally and amongst your peer group as part of the wider organization. You will inspire talented technologists to want to work with you and be responsible for ensuring a challenging working environment for our elite technical talent, to achieve the best for the organization and our players.

KEY RESPONSIBILITIES

- Full accountability for all our games technology, architecture and tech processes across multiple sites and products
- Identify, communicate and pursue key strategic engineering efforts
- Drive communication across all disciplines in coordinating engineering plans
- Lead technical design reviews to identify potential problems
- Identify/plan tool development to improve productivity
- Provide full support to teams when technical challenges are encountered
- Work with leads and technical directors of each game team to ensure alignment with our technology portfolio
- Manage and coach our engineers to higher levels of excellence.
- Maintain a broad view of emerging technologies and developments
- Champion sound, actionable, technical solutions required to provide a high-quality experience to our players
- Partner with production to remove blockers and consistently hit sprint goals

QUALIFICATIONS

Required

- A minimum of 10 years management experience in a commercial organization with substantial experience in a CTO/Senior management role.
- Significant senior management experience within the online gaming industry and/or high velocity online transactional environment.
- Management of a fast paced business of a similar size and experience of working within a corporate structure.
- Proven ability to significantly increase efficiencies and continuously deliver positive results to the company.
- The CTO will be the Company’s spokesperson in all technology-related matters and as such the candidate will be extremely confident in articulating their technology knowledge when dealing with all parties outside the Company.
- Ability to nurture the management skills of all managers in the IT Department and ensure skills and career development of all members of the IT Department, through timely and accurate performance reviews.

- Establishing a process to identify and develop talent within the IT Department and develop a robust succession plan for the department.
- Skills in business analysis, business process design, project management, and e-commerce strategy.
- Have a successful track record of establishing and managing multi-location development operations
