

You are a DevOps engineer with software development background who likes working on everything that helps to improve the quality of life for your team and providing your expertise in creating a performant CI/CD stack to boost the code development/build process.

KEY RESPONSIBILITIES

- Collaborate closely with our engineering team to help them be more productive by improving development tools.
- You will take ownership of CI/CD stack, keeping it robust, observable, stable, and performant.
- Research, implement, and develop tools to help developers write new code.
- Ensure the CI/CD infrastructure and process is reliable and consistent.

QUALIFICATIONS

Required

- Solid background in Linux.
- Experience in CI/CD stack development and maintenance.
- Working proficiency with Ruby, Javascript or Python.
- Knowledge of AWS technologies (EC2, load balancing, auto-scaling, IAM, S3, Route53, etc.).
- Telemetry and monitoring experience (Graphite, StatsD, Grafana, Kibana).
- Experience with containerization (Docker, Kubernetes, etc).
