

As an Engineering Manager you will take ownership for the execution of key components across our technology roadmap, guiding a focused team of engineers to build and refine components, tools, and capabilities to support Game Security initiatives. Working directly with senior management in the Game Security group, you will be entrusted and empowered to deliver mission critical capabilities that protect the safety and security of our major franchise titles.

KEY RESPONSIBILITIES

- Responsible for the full product development lifecycle, from gathering requirements, to prioritizing features, assisting engineers writing specifications, reviewing execution plans and ensuring alignment against strategic technology development goals.
- Work with Game Security leadership to align technical requirements across multiple stakeholders.
- Resolve ambiguity, highlight risk, and provide predictable estimates for deliverables.
- Balance resources across multiple projects already in flight, and build plans for upcoming roadmap deliverables.
- Identify risks early and often, and suggest mitigation strategies that consider multiple paths and pragmatic solutions. Be able to offer alternative approaches, balancing technology and business requirements against time and resources.
- Provide hands-on engineering leadership by example, offering guidance and mentorship to engineers.

QUALIFICATIONS

Required

- 7+ years of technical product ownership, engineering team management in support of video game development at engine, tools, or feature-level, or similar experience.
- Experience with defining and leading platform initiatives and/or complex software engineering projects.
- Deep experience with each stage of software development lifecycle, from inception, design and implementation, through to QA and deployment; translating requirements into effective engineering execution.
- Experience in practicing agile development practices, and strong working knowledge of a variety of project management techniques.
- Be able to practice what you preach – diving in and contributing directly to development efforts when necessary.
- Able to proactively navigate roadblocks with effective solutions. Can break down complex projects into manageable phased deliverables.
